

You are tasked with developing a mobile application called **SRKI Recruitment App**, which streamlines the recruitment process.

Practical assignment -1

Aim: Acquaintance with layouts and various **UI components** and their attributes.

Task: Design an activity as shown below utilizing **Linear, Relative, and Constraint layouts** to capture job details entered by the user.

Note: Incorporate attributes such as **ems, background, textSize, layout_margin, padding, layout_weight, textStyle, textColor, fontfamily, background_tint**, etc to create an aesthetically pleasing layout.

The screenshot displays the SRKI Recruitment App interface. At the top, the title "SRKI RECRUITMENT APP" is centered. Below the title, there are five text input fields with labels: "Enter Full Name", "Enter Mobile Number", "Enter Email", "Adhar no.", and "Gender". The "Gender" field has two radio button options: "Male" and "Female". Below these, there is a section for "Other activities:" with three checkboxes: "NCC", "NSS", and "Sports". Following this is a "Highest Qualification:" section with a dropdown menu currently showing "--Select--". Below that is a "Department:" section with another dropdown menu also showing "--Select--". At the bottom of the form, there are two buttons: "Submit" and "Clear". Below the buttons, there is a label "Output here". The status bar at the top right shows the time as 11:46.

Assignment 2:

Aim: Populate and retrieve details from radio buttons, checkboxes, spinner, and edit text fields upon button click.

Tasks:

- Referring to assignment 1, populate the spinner for Highest Qualifications using ArrayAdapter. (**Options: Ph.D., Masters, Bachelors**)
- Populate Department Spinner using strings.xml (**options: CS, BT, MB**)
- On submit, display name, RadioButton, Spinner, and CheckBox details in TextView(s).

Output Example:

Name: Thomas

Gender: Male

Other Activities: NCC, Sports

Highest Qualification: Masters

Department: CS

Advance:

Add backend validation to ensure the user enters all the information before submitting details.

Assignment 3

Aim: Utilizing **Intent** for Activity Navigation and Data Passing.

Task:

Referring to Assignment 1, modify the registration activity to perform the following operations:

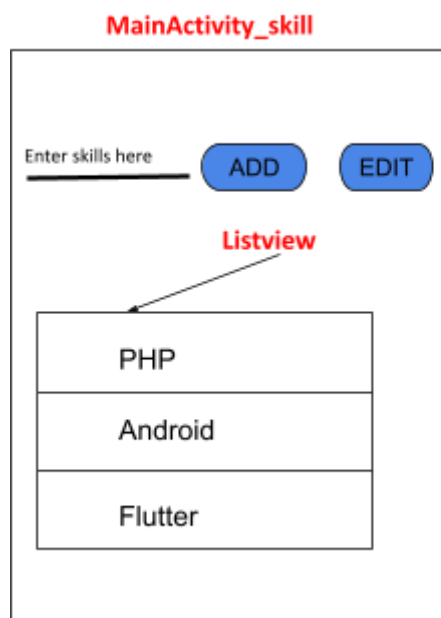

- On submitting, navigate the user to the second activity "**MainActivity_Skills**".
- Using Intent Display details inputted in Registration Activity on "**ManinActivity_Skills**".

Note: Adhar no. must be an integer value (Eg: 1234)

Assignment 4

Aim: Performing CRUD on **ListView** along with **validation** and **User-defined functions using Toast**.

Task: Referring to Assignment 2, modify the “MainActivity_skills” activity to prompt users to input a minimum of **three skills** they are proficient in. **Add the following UI controls:**

Operations:

1. **Add:** Insert and display the skills in the ListView. **Show a Toast** message.
2. **Select:** Change the color of the selected item (**android: listSelector**) and display it in a Toast.
3. **Update:** Modify the selected item. Show a Toast message for a successful update.
4. **Remove:** Delete the selected item on **long-press** and show a Toast message.

Note: Create a user-defined function **CallToast(String s)** to display messages for CRUD operations.

Advance: Implement validation to ensure the skill textbox is not empty when inserting or editing data. Display appropriate messages in Toast.

Assignment 5

Aim: Managing **Shared Preferences** across **multiple activities**.

Task: Create the following activities: 1) MainActivity_login 2) MainActivity_details

Log in using the following credentials:

Email: vipin@gmail.com (String)

Adhaar number: 1234 (Integer)

Password: Vipin

1. Upon successful login, **save email and Adhaar in Shared Preferences** and display it on **"MainActivity_skill"** (created in a previous assignment).
2. Add skills to the ListView, preserve the selected skill in Shared Preferences, and store it.
3. Retrieve the **email, Adhaar, and skill** from Shared Preferences on a button click event, and display them in the newly created activity **"MainActivity_details"**.
4. Remove data from Shared Preferences on Signing Out and navigate to **"MainActivity_Login"**.

Output Example:

MainActivity_login	MainActivity_skill	MainActivity_details
<p>Email: vipin@gmail.com</p> <p>Adhar: 1234</p> <p>Password: *****</p> <p>Sign In Reset</p>	<p>Email: vipin@gmail.com</p> <p>Aadhaar: 1234</p> <p>Enter skills here ADD EDIT</p> <div><div>PHP</div><div>Android</div><div>Flutter</div></div> <p>Selected skill</p>	<p>Sign Out</p> <p>Email: vipin@gmail.com</p> <p>Aadhaar: 1234</p> <p>Skills: Android</p>

Assignment 6

Aim: Implementing **Menus** and **web View**

Task 1:

Referring to assignment 5, implement the **Options Menu in “MainActivity_details”** with the following options:

- 1) **“Skill”**: Navigate to the **“MainActivity_skills”** activity.
- 2) **“About SRKI”**: Display an About page using **WebView** when selected
 - a) **Create a new activity named "AboutActivity"**.
 - b) In **"AboutActivity"**, use a WebView to load <https://www.srki.ac.in/>.
- 3) **“Logout”**: Clear data from shared preference and navigate to login activity

Task 2:

Referring to assignment 4, implement a **pop-up menu on Listview in “MainActivity_skills”**. Allow the user to delete selected skills.

Admin Dashboard Enhancement: Department Management

Assignment 7

Aim: To develop an admin-side module by using **RecyclerView** to display and manage a list of departments with **ArrayList<String[]>** as the data source.

Task: Create a new activity, "**MainActivity_dept**," (refer to the figure below) to use RecyclerView for displaying and managing department information.

MainActivity_dept

The screenshot shows the MainActivity_dept interface. At the top, there are three input fields: "Enter Department Code", "Enter Department Name", and "Enter No of employees". Below these fields are three buttons: "ADD", "EDIT", and "REMOVE". Below the buttons is a red arrow pointing to a RecyclerView. The RecyclerView displays a list of departments with the following data:

101	Computer Science	10
102	MicroBiology	7
103	Environmental Science	5

Operations:

1. **Create:** Add department details, including Code, Name, and Number of Employees.
2. **Remove:** Implement functionality to delete department details using the Department Code.
3. **Update:** Develop an edit feature to modify department details based on the Department Code.
4. **Display:** Use RecyclerView to showcase the list of departments.

Assignment 8

Aim: To develop a department management feature in the SRKI Recruitment App using **SQLite**, supporting CRUD (Create, Read, Update, Delete) operations and including a **SearchView** for efficient searching.

Task: Implement CRUD operations for department management in an SQLite database.

Database Table:

Tbl_dept: (dept_code - int primary key autoincrement, dept_name, num_employees)

Operations

- **Create:** Allow the user to register department details (Dept Name, Dept Code, Number of Employees) in the SQLite database.
- **Read:** Display registered department details in a ListView. Use ArrayList<String[]> to show multiple pieces of information for each department.
- **Update:** Allow the user to update department details using dept_code.
- **Delete:** Allow the user to delete department details using dept_code.
- **Search:** Implement a **SearchView** to allow users to search for department details.

Advanced:

- Add a **context menu** to the ListView to enable data deletion, triggered by a long click on list items.
- Prompt an **alert dialog box** for confirmation before deleting a record.

Assignment 9

Aim: Performing CRUD Operations on **MS SQL Server Database**.

Task: Referring to Assignment 8, incorporate functionality for storing and retrieving data from the **MS SQL Server database**.
